

MARCOS CISNEROS

479-318-7455 | mcisneros0805@gmail.com | linkedin.com/in/marcos-cisneros | github.com/mcisnerosy | Notre Dame, IN

EDUCATION

University of Notre Dame

Bachelor of Science in Computer Engineering

Notre Dame, IN

May 2027

Awards: Questbridge Scholar, LULAC Scholar, Springdale High School Valedictorian

Relevant Coursework: Probability & Statistics, Data Structures, Operating System Principles, Computer Architecture, Programming Paradigms

EXPERIENCE

Notre Dame Football Recruitment Department

Recruiting Intern

Notre Dame, IN

Fall 2023 – Present

- Evaluate game film on Hudl across multiple position groups (TEs, LBs, DLs, CBs, safeties) each week, identifying standout plays and critical mistakes and clipping them into individual recruit folders for coaching staff review.
- Maintain recruiting databases in Google Sheets tracking prospect attendance, transcripts, and performance data across a pipeline of 30+ active prospects; contributed to NCAA data research analyzing historical national championship roster construction.
- Hosted 4 and 5 star recruits and their families across game days, spring practices, and official visits, representing Notre Dame at a consistently high standard throughout multi-day visit weekends.

Quadrivium Inc.

IT Technician Intern

Springdale, AR

Summer 2023

- Maintained asset management records for 50-100 legacy devices, correcting initialization and decommission data to improve inventory accuracy across multiple client businesses.

PROJECTS

College Football Recruiting vs. Wins Analyzer

Spring 2025

- Pulled 14 years of recruiting class rankings and game results across 255 FBS programs using the CFBD API; trained logistic regression and random forest models to test whether recruiting rank predicts game outcomes.
- Finding: returning production (AUC 0.70, 64.2% accuracy) outperformed recruiting rank as a game outcome predictor; benchmarked model against Vegas point spreads to evaluate analytical signal against the market.
- Deployed interactive Streamlit dashboard with documented GitHub repo; built with Python, pandas, and scikit-learn.

Housing Prices Data Analysis

Spring 2024

- Processed 50,000+ housing records across California and Texas using Python (Pandas, Matplotlib); built automated data-cleaning pipelines and published findings as an interactive HTML dashboard on GitHub.

Football Player Stats Database

Fall 2024

- Built a C program managing offensive and defensive player databases with position-specific stat tracking and automatic calculation of derived metrics including passer rating, completion percentage, and yards per carry.

TECHNICAL SKILLS

Languages & Analytics: Python, R, SQL, JavaScript, C, MATLAB, HTML/CSS

Libraries & Tools: Pandas, NumPy, Matplotlib, scikit-learn, Streamlit, React, FastAPI, Git, Linux, REST APIs

Analytical Methods: Logistic regression, random forest, statistical modeling, data pipeline automation, data visualization, predictive modeling

AI & Automation: Anthropic Claude API, GitHub Copilot, Cursor, prompt engineering

Sports & Domain: Hudl film evaluation, recruiting database management, player evaluation, Division I sports operations, scheme recognition

ACTIVITIES

- ColorStack, University of Notre Dame 2025 – Present
- Society of Hispanic Professional Engineers (SHPE), University of Notre Dame 2023 – Present
